

On the operations side the team has achieved some very good accomplishments starting with safety. The plant has achieved 508 days without a recordable or lost time incident. Additionally, key projects regarding new robot safety cages, mold lifting ring standardization, and "C" cert replacements were completed. Important training activities have been completed including electrical safety, crane operation, LOTO, and FaroArm CMM. Other improvements include migrating to the new maintenance system called Dude Solutions to drive our refreshed PM and PDM maintenance processes and continued work on Operator's work station standardization to name a few.

In summary the Anderson facility is in a state of transition driven by growth. The challenge of new equipment, processes, people, and new customers is being met head on by the entire organization. Sales, Program Management, Central Engineering, Purchasing, Central Quality, and the Plant Operations team are working closely to ensure we will be successful. There is a bright future ahead and a lot of work to be done but with teamwork and perseverance we will succeed!
